

Know they're safe. Without hovering.

A family safety app for parents who want to worry less and nag less. Location, screen time and gentle safety alerts — in one calm place your whole household can see.

Know they're safe

See where they are on a live map. Get a nudge when they reach school, or leave it.

See their world

A plain-English view of screen time and apps — so you can guide, instead of guess.

Agree the rules

Set routines like School Hours or Lunch. They run on their phone, with or without signal.

Your child can see exactly what you can

Every Nestly-managed phone shows the child a plain list of what's shared — location, screen time and safety alerts. **Nestly never reads inside their private messages.** Trust is the point; secret surveillance isn't the product.

WHAT IT COSTS

Free

One parent and up to two children, with every feature included — location, geofences, screen time, web filtering and safety alerts. More children are **£3.99 a month each**.

GET STARTED

Install it on both phones, tell each one whose it is, and pair them over Bluetooth. About five minutes, no account needed.
