

How Nestly works

Two phones, yours and your child's. Nestly keeps them gently connected — so you know they're okay, their routines hold, and they can always reach you. No hovering, and nothing hidden from them.

1 • Set it up

Five minutes per phone. No account needed to start.

2 • Agree the rules

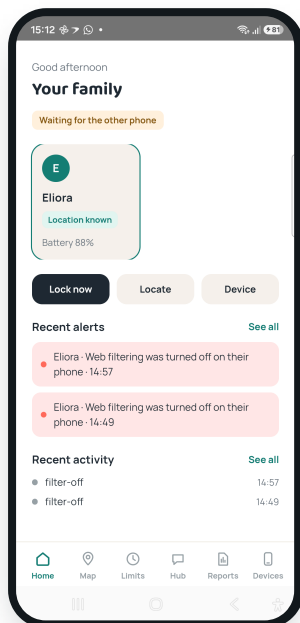

Routines, zones and reminders — visible to both of you.

3 • Get on with your day

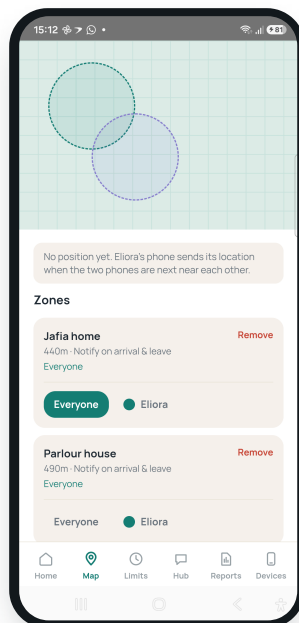

Their phone keeps working even with no signal.

Everything in one calm place

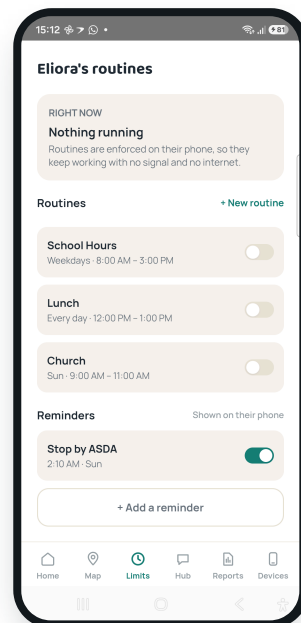

These are real screens from the app, not illustrations. Nestly opens on the people, not on a dashboard of numbers.

Home — everyone at a glance

Map — places that matter

Limits — routines, not nagging

Home

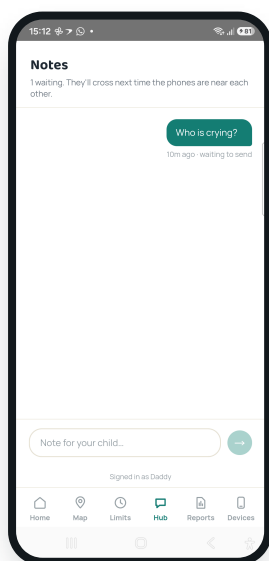

Each child on a card: where they are, battery, and whether their phone is paused. One tap to lock, locate or leave a note.

Map & zones

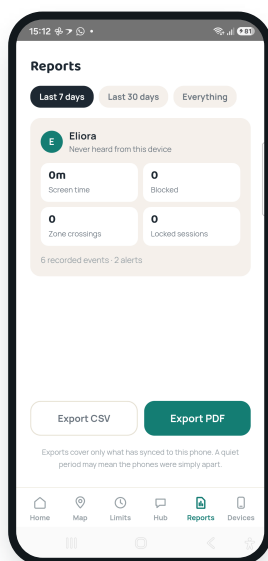

Draw a circle around home, school or grandma's. Choose which children each zone covers — most cover everyone. You're told on arrival and on leaving.

Limits

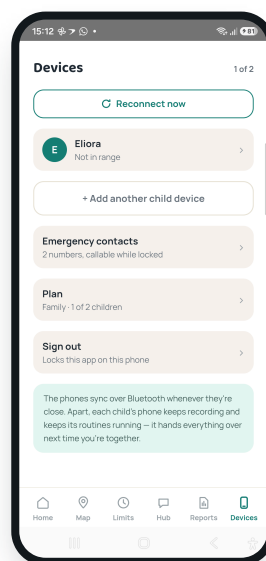

Routines like School Hours or Bedtime. They run on your child's phone, so they keep working with no signal and no internet.

Hub — notes both ways

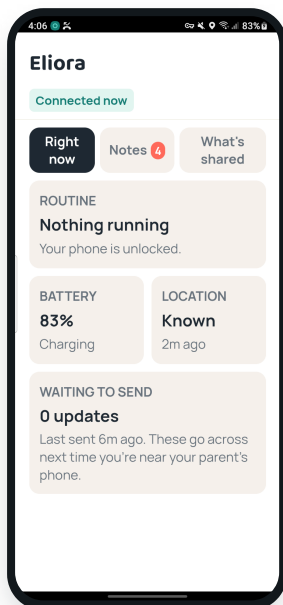

Reports — the week in one place

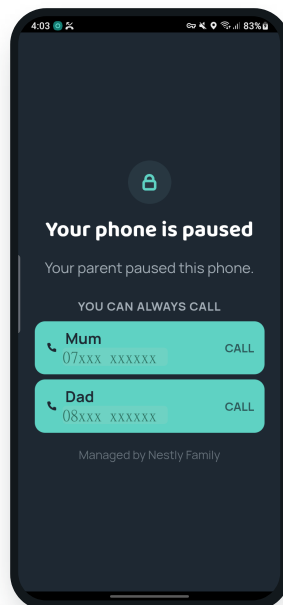

Devices — add and manage phones

Your child can see exactly what you can

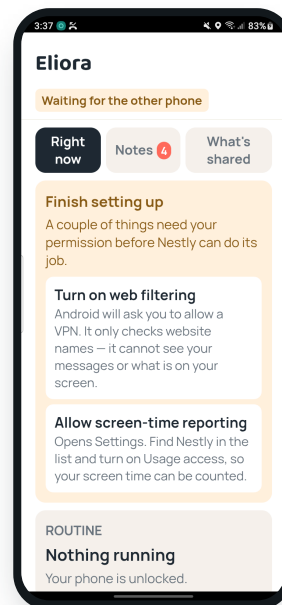

This is the part most apps leave out. Nestly shows the child a plain list of what is shared — because a child who knows the rules keeps them, and a child who feels spied on finds a way around them.

Their home screen

When a routine is running

What is shared, in plain words

What Nestly shares

- Where they are, and when they arrive or leave a zone
- Screen time and which apps were used
- Sites that were blocked, and safety alerts

What it never does

- Never reads inside their messages
- Never records audio or their screen
- Never hides that it is running — a notice stays on their phone
- Never blocks the numbers you set as emergency contacts

They can always call for help

You choose up to four numbers. They stay callable even while the phone is paused, with no signal and no internet — a locked phone that can't dial for help isn't safety, it's a risk.

Five minutes, once

- 1 Install Nestly on both phones**
Yours and your child's. Same app — it asks which one it is on first run.
- 2 Choose the role**
On yours pick "This is my phone". On theirs, "This is my child's phone".
- 3 Pair them**
Hold the phones together. Yours finds theirs over Bluetooth and remembers it.
- 4 Add your emergency numbers**
Do this before you ever lock their phone.
- 5 Set your first routine**
School Hours and Bedtime are ready to switch on.

Why Bluetooth?

Right now the two phones talk directly to each other, with no company server in between. Your family's location never leaves your phones.

It means updates arrive when you're near each other rather than instantly — their phone records all day and hands everything over when you're next together. Routines and zones keep working the whole time.

Coming next

An optional online account adds live updates while you're apart, a second parent on the same family, and history kept safely off the phone.

WHAT IT COSTS

Free

One parent and up to two children, with every feature included. Larger families: **Pro** covers 2 adults and 4 children, **Premium** 3 adults and 6 children.

A note on what Nestly is not. It is not spyware, and it does not pretend your child cannot see it. Routines are agreed, not imposed in secret — that is the whole design. If you want something that watches a child without their knowledge, Nestly is the wrong app.
