

Are you worried about giving your young children and teenagers phones?

Help us build a family safety app that works

We have a support application for you. Nestly keeps a parent and a child's phone in step — where they are, what they're doing online, and the routines you've agreed. It is built to keep working when there is no signal, which is the part most apps get wrong. **It is not finished, and that is why we need you.**

See where they are

A live map, and a nudge when they reach school or leave it. Works over the internet, or over Bluetooth with no signal at all.

Screen time in plain English

Which apps, how long, which sites were blocked — so you can guide rather than guess.

Routines you both agree

School Hours, Bedtime, Homework. They run on their phone whether or not it has signal.

WHAT WE'RE ASKING

- Use it for two weeks as you normally would.
- Tell us what confused you, broke, or annoyed you.
- One short call or message at the end — ten minutes.

Free for testers, for the whole trial.

YOU'LL NEED

Two Android phones — one yours, one your child's. Android 5.1 or newer.
There is no iPhone version yet.

Installed from a link, not the Play Store — we'll walk you through it.

ABOUT YOUR DATA

Your child's phone shows them exactly what is shared — nothing is hidden from them. We never sell data, and nothing goes to advertisers. Ask us to delete everything at any point and we will, no questions.

WHAT HAPPENS NEXT

- 1 You get in touch**
Follow the link or reply to us. We send you the app and a setup code.
- 2 Twenty minutes to set up**
Install on both phones, link them with the code, agree the routines together.
- 3 Use it, then tell us**
Two weeks of normal life. Then ten minutes telling us what to fix.
